In addition to high strength, the raw material used for structural load bearing members also possesses adequate ductility to ensure toughness. The material also has the necessary impact strength for cold room applications up to -30 deg C.

Fasteners : Fasteners (Except Anchor Bolt) of Grade 8.8 are used for bolting uprights with base plates and bracings. These fasteners are of a galvanized finish to suit industrial atmosphere.

Surface Finish : All components are given a thorough anti-rust treatment to prevent corrosion, thereby increasing the life of the component. Steel components are powder coated for obtaining a smooth, scratch resistant and a lasting attractive, finish. The Dry Film Thickness (DFT) of 65-70 microns is achieved on an average after Powder coating.

All components are subjected to an elaborate 4 step, six zone anti corrosion treatment, viz. De-greasing as per IS 6005:1970, Rinsing, Phosphating as per IS 3618:1966 and RO water rinsing.

Furthermore, the testing of paint for various physical and chemical properties is done as per ASTM Standard.

Assembly and Installations : The drive-in system is of complete knock down construction. The racks are grouted on the floor using Expansion bolts. No welding will be carried out at site.
